Observations/Comments:		
Has control been attempted? If you used a chemical, please indicate the product name, rate, and date of application.		

Collecting Insect Specimens for Identification

Be very careful in collecting insect specimens or plant material connected with insect specimens. Send along as much of the affected plants, trees, etc. connected with the insect pest as possible. Insect specimens should be killed just prior to submission; freezing overnight works well for this process.

Packaging

Place insects in a container, then pack the container gently with a soft material such as cotton or excelsior in such a way as to keep damage to the insects to a minimum. Ship immediately after packing. *Please note that mailing samples stored in alcohol is illegal, as alcohol is both liquid and flammable.*

If large plant specimens are to be shipped with the insect pests:

- Send as much of the plant as possible,
- Explain where the pests were found (if separated from plant specimen),
- Wrap plant roots or soil in plastic bag to prevent their drying out,
- Pack all items in sturdy containers so that they will arrive in good condition,
- Ship specimens immediately!
- Fill out the Insect Identification Form on the reverse side completely!
